

Evaluation Form

Validate patients' knowledge and skills to perform peritoneal dialysis

Aim: To reduce variability among PD education programs by focusing on the most important key points to achieve patient autonomy.

In EDTNA/ERCA we decided to perform a Workshop on this topic to develop a worksheet for nurses, highlighting the quality of care and clinical evidence based on Orem Theory (Theory of Deficit of Self-Care).

This Evaluation Form is still in a conception phase and it has never been used and tested. It is meant to be applied daily, during the education process of learning and training PD technique (1 evaluation per day), until the patient is discharged with the ability to perform PD autonomously.

We kindly ask you to analyse this worksheet and consider if it is suitable to be applied in your daily practice.

After analysing it, please feel free to give your suggestions/comments and corrections. We will perform a *focus group* analysis to gather your data and experience.
